PROFESSIONAL SUMMARY

Senior engineer and technical lead with 8+ years in Java/Spring backend and full-stack development, with primary architectural ownership of a rail intermodal pricing platform: 10+ Spring Boot microservices, Kafka-based event-driven scale-out, and an Angular front end on OpenShift. Leads a cross-functional engineering and QA team through sprint planning, refinements, and day-to-day technical direction, and works directly with business and operations stakeholders to gather requirements, resolve delivery blockers, and shape solution design for the platform's roadmap. Architected an AI-driven automation workflow that processes customer rate requests end to end, from inbound request through automated rate lookup and approval to response delivery. Led key workstreams in the platform's migration to AWS and Databricks. Applies modern AI-assisted engineering tools to accelerate delivery and documentation, and brings a full-SDLC background spanning requirements, architecture, hands-on development, and production support.

TECHNICAL SKILLS

Backend: Java 21, Spring Boot 3.5/4.0, Spring Data JPA, REST/HATEOAS, microservice architecture

Messaging: Apache Kafka, TIBCO EMS, IBM MQ

Data: SQL Server, Teradata, Databricks, SSIS ETL

Cloud/Platform: AWS (EKS), OpenShift, Docker, Kubernetes, Jenkins CI/CD

Frontend: Angular 11-21, TypeScript, RxJS

Quality/Observability: SonarQube, SAST scanning, JaCoCo, Datadog APM

AI-Assisted Development: Claude, Cursor, GitHub Copilot

CERTIFICATIONS

AWS Certified Cloud Practitioner — Amazon Web Services

PROFESSIONAL EXPERIENCE

Norfolk Southern Corporation, Atlanta, GA **July 2021 – Present**

Senior Technology Engineer

- Act as team lead and solution architect for a cross-functional engineering and QA team, running refinements and sprint planning, resolving blockers, and owning technical direction and code quality across the team.
- Partner directly with intermodal business and operations stakeholders to capture requirements and pain points, and translate them into proposed designs and Jira-tracked delivery plans.
- Own architecture end to end for an intermodal rail pricing platform: 10+ Spring Boot microservices (pricing core, optimizer, scenario/network modeling, lane processing, export) independently deployed and scaled on OpenShift.
- Designed the event-driven scale-out layer using Kafka to fan out network-modeling scenarios across parallel lane processors, reducing inter-service latency by over 30%.
- Architected an AI-driven automation workflow for customer rate-request handling, covering inbound request intake, automated rate lookup, approval routing, and response delivery, removing manual steps from a high-volume pricing process.
- Leading platform workstreams for two strategic migrations: OpenShift to AWS-managed Kubernetes (EKS), and the enterprise data warehouse and SSIS ETL pipelines to Databricks.
- Diagnosed and resolved recurring SSIS ETL failures and data-quality defects feeding downstream rate and warehouse reporting, reducing manual reruns.
- Built the Angular/TypeScript front end for core pricing workflows (bid optimization, rate query, scenario modeling); integrated REST/HATEOAS APIs and enterprise SSO.

- Set up Datadog monitoring and alerting for platform services, aligning escalation paths with the team's on-call and support model.
- Followed Agile/Scrum practices across 2-3 week sprints, covering analysis, design, implementation, and test phases of the SDLC.
- Designed and developed REST microservices using Spring Boot, secured with Spring Security; published and consumed SOAP web services deployed on JBoss.
- Developed the business layer (Spring IOC/AOP, DTO, JTA) and persistence layer (JPA/Hibernate with Entity Manager); produced UML design documentation (use case, class, and sequence diagrams) in Visual Paradigm.
- Apply AI-assisted engineering tools (Claude, Cursor, GitHub Copilot) alongside SonarQube quality gates and Datadog observability to accelerate delivery without compromising code quality.

Environment: Java 21, Spring Boot, Kafka, AWS EKS, OpenShift, Angular, Databricks, Datadog, JBoss, Hibernate

Technisar Solutions Inc., Deerfield, IL **March 2019 – July 2021**

Programmer Analyst — Client: Norfolk Southern Corp, Atlanta, GA

- Built Spring RESTful services and ExtDirect Java APIs bridging ExtJS/Angular front ends to server-side logic; used Jackson JSON and JAXB message converters to generate recommendation responses.
- Used Spring IOC for dependency injection in recommendation modules, generating outputs at various REST endpoints.
- Wrote JUnit test cases and supporting documentation for delivered services.

Environment: Angular 9, Java, JDK 1.8, Spring 3.x IOC/MVC, Hibernate 3.2, DB2, IntelliJ, Maven, Gradle, JavaScript, CSS, HTML, XML, SVN, Github, ExtJS, JUnit, Mockito

Swift Solutions Inc., Cary, NC **May 2018 – February 2019**

Programmer Analyst — Client: Norfolk Southern Corp, Atlanta, GA

- Developed UI pages using HTML5, CSS3, JavaScript, Bootstrap, ExtJS, jQuery, and AJAX; designed the Java engine/API (ExtDirect) connecting the ExtJS front end to server-side Java methods.
- Used Spring IOC for dependency injection and wrote Spring RESTful web services generating JSON/XML recommendation responses via Jackson and JAXB.
- Used jQuery and AJAX on the view layer to improve responsiveness of customer-facing pages.

Environment: Java, JDK 1.8, Spring 3.x IOC/MVC, Hibernate 3.2, DB2, IntelliJ, Maven, Gradle, Apache Tomcat, JavaScript, jQuery, CSS, HTML, XML, SVN, Github, ExtJS

Dexter Sys Inc., Leesburg, VA **October 2017 – April 2018**

Programmer Analyst — Client: Wells Fargo, Charlotte, NC

- Developed and supported Java EE applications for fixed-income trading, electronic trading, and real-time risk/PnL systems (Kraken Callable, Kraken CDS).
- Designed the Java engine/API (ExtDirect) connecting front-end JavaScript/ExtJS to server-side Java methods; wrote Spring RESTful web services and used Splunk for centralized logging.
- Communicated with business teams to define system interface requirements and performed technical testing and troubleshooting in a test lab environment.

Environment: Java, JDK 1.6/1.7, Spring 3.x IOC/MVC, Hibernate 3.2, DB2, Apache Tomcat, MyEclipse, Maven, SVN, Github, JUnit, Mockito

EDUCATION

Florida Institute of Technology **Fall 2016**

Master of Science, Computer Information Systems

Jawaharlal Nehru Technological University **Fall 2013**

Bachelor of Technology, Computer Science and Engineering
